Hiring Manager,
Infineon Technologies,
Kulim, Kedah

Dear Hiring manager,

Re: Application for Industrial Trainee – Chip Project

I am writing to apply for the Industrial Trainee – Chip Project position at Infineon Technologies in Kulim, Kedah. As a Physics undergraduate with hands-on experience in precision measurement and device characterization, I am eager to contribute to your die-level test operations while building deeper expertise in semiconductor test.

My strongest preparation is in measurement. I fabricated D-shaped optical fiber temperature probes through controlled side-polishing, producing five configurations with 2–8 dB insertion loss to study how polishing depth affects sensing performance. I then characterized their OTDR-based response from 40–80 °C in 5 °C increments, extracting a best sensitivity of 0.0008 dB/°C and $R^2 = 0.9552$. I also studied how pulse width and probe geometry influenced the readings, reinforcing the importance of controlling variables during measurement. This work demanded careful instrument setup, repeatable data collection, and quantitative analysis — the same discipline that die-level testing requires. I have also designed and characterized CMOS circuits, extracting a 0.833 V switching threshold and 22.11 ps propagation delay from DC and transient simulations, and I am experienced in circuit testing, troubleshooting, soldering, and lab instrumentation.

Infineon's Kulim site is a leader in power semiconductor manufacturing, and a die-level test role sits exactly where my interests lie — at the intersection of physical devices and rigorous measurement. My coursework in semiconductor devices, advanced process technologies, and crystal growth gives me a solid grounding in the physics behind the samples I would test, and my 3.69 CGPA reflects consistent academic strength. I am comfortable in Linux and Python, I document my work carefully, and I learn new equipment and procedures quickly. I am drawn to test engineering because it rewards the same patience and attention to detail that my lab work has taught me.

I would welcome the chance to bring my measurement discipline and curiosity to your team. Thank you for considering my application; I would be glad to discuss how I can contribute to the Chip Project.

Sincerely,

Aqil Yusri
